Crafted Excellence

ABOUT US

Our company originated from German technology, focus on high-end bathroom hardware products R & D, production and sales. Our products cover shower systems, faucets, showers, etc., and are committed to providing the ultimate bathroom experience for users around the world.

Adhering to the design principle of "quality makes classic", we combine German advanced manufacturing technology with the spirit of craftsmanship to ensure that every product has excellent quality. Through continuous innovation, USBathroom R & D team is committed to providing both functional and aesthetic high-end bathroom hardware products to meet users' pursuit of quality life.

Determined to become a "century-old enterprise, a century-old brand". Our company pursues excellence and sustainable development, and strives to set a benchmark in the global market and win the trust of customers. In the future, we will continue to take "German craft, global quality" as the core, committed to building a world-class bathroom brand.

Using the advanced gravity casting process, the faucet shell is formed by the international top Italian IMR gravity casting and sand core molding equipment. The cast products have tight structure, dense crystallization, uniform thickness and smooth surface.

The world's most advanced CNC (automatic machining center), multi-process processing, to ensure the processing size of the ultra-high precision and machining surface finish, to ensure the long-term sealing performance of the product.

Skilled craftsmen use different grades of grinding wheels and cloth wheels to polish the surface of the product step by step to make the surface smooth and delicate. Dozens of processes are completed by hand, the control of the mirror effect not only reflects the harsh technical standards, but also reflects USbelief in the pursuit of excellent quality.

Far higher than the international standards of strict testing procedures, quality inspection personnel one by one inspection, do not let go of any defects.

DESIGNED AND PRODUCED IN China

Everything is under control

Shower head technologies that can bring more showering pleasure

OVERSIZED TOP SPRAY

The oversized overhead showerhead features a uniform water flow and is easy to disassemble and clean. It is an excellent choice for your rainfall-style shower system. The handheld showerhead has an exquisite appearance, is convenient and practical, and offers multiple functions.

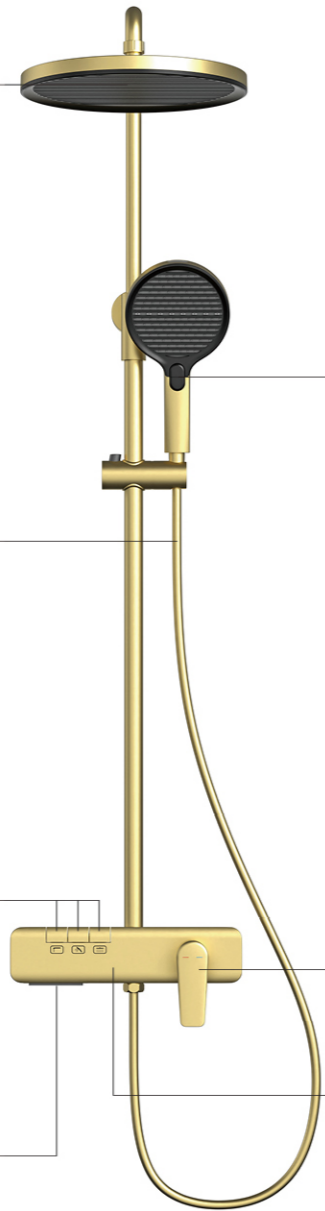

The golden shower hose is over 150cm long, with an anti-tangle design to prevent knotting and dripping, enabling a carefree bath.

BUTTON-OPERATED WATER OUTLET MODE SELECTION

The operation buttons make it convenient to switch between different water outlet modes according to your personal preferences.

WATER OUTLET IN THE FORM OF A WATERFALL CURTAIN

The large-area water outlet creates a refreshing and invigorating showering sensation. With its concealed design, it saves space and prevents accidental bumps.

Switch the water outlet mode by pressing the button.

 Rainfall water: The strong water flow brings a refreshing feeling and is great for washing hair.

Rainfall water

 Powerful water: Strong and invigorating massaging water spray.

Powerful water

 Spray gun water: Integrated spray gun design with strong impact.

Spray gun water

HUMANIZED HANDLE

The exquisitely formed handle allows for convenient cold and hot water control and dual water outlets.

COLD TOUCH TECHNOLOGY

The faucet isolates the hot water pipe from its surface to prevent scalding, safeguarding your safety.

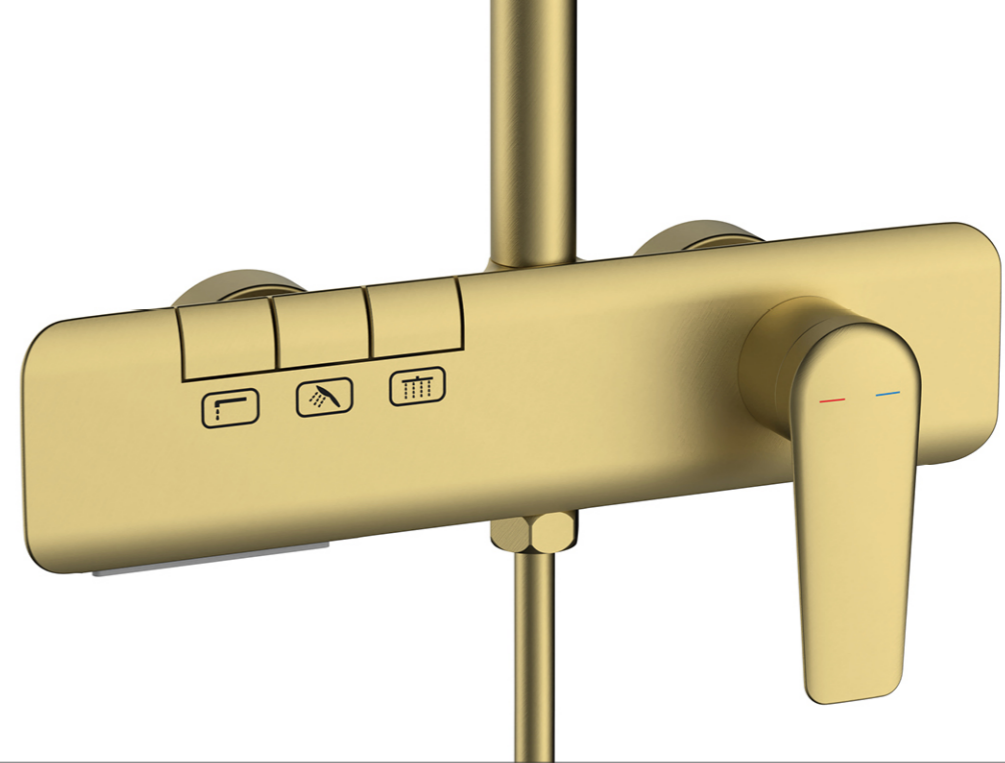

PRODUCT ADVANTAGE

Complete system of head shower, hand shower and shower shower

Hold three water modes: Rain shower, Strong Water and spray gun water

Because it can be installed on existing joints, it is the ideal solution for simple bathroom installations

The main key switching technology ensures that the key switches the water outlet mode

Our company provides various exposed showerheads. This not only enhances the appearance and technical aspects of the bathroom but also improves the showering comfort. The water volume, water pressure, and water temperature can all be conveniently controlled. The key advantage of the exposed showerheads lies in the fact that they can be easily and quickly installed on the existing joints.

Multiple Water Outlet Modes

Our multifunctional handheld showerhead supports various water outlet modes such as rainfall water, powerful water, spray gun water, etc. You can easily adjust the water volume and the water outlet mode, creating a pleasant bathing atmosphere for you.

Physical Anti-scalding Technology

The special technical design creates an isolation layer between the surface of the handheld showerhead and the hot water flowing inside. Even when taking a shower with relatively high water temperature for a long time, it won't feel hot to the touch.

Easy-to-clean Showerhead

The extra-large overhead showerhead features a uniform water flow and is easy to disassemble and clean, making it an excellent choice among rainfall showerheads. The handheld showerhead has an exquisite appearance, is convenient and practical, and offers multiple functions.

Electroplating Treatment

High-quality copper materials are selected. The surface goes through processes such as grinding, polishing, and multi-layer electroplating treatment. With a unique plating process, it has a seamless surface that is crystal clear and shiny. All products have passed a long-term neutral salt spray test before leaving the factory, ensuring they are durable and providing a magnificent visual enjoyment.

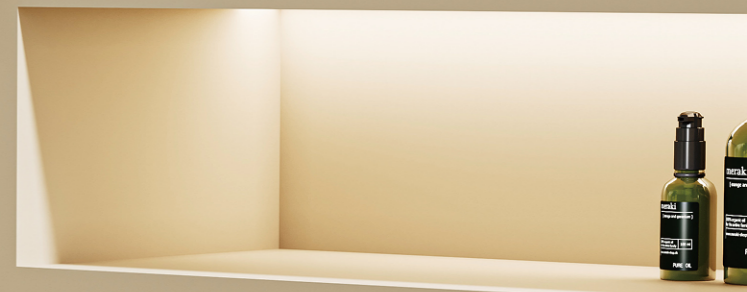

Understated simplicity
a touch of sophistication – luxury living within reach.

PVD Technology

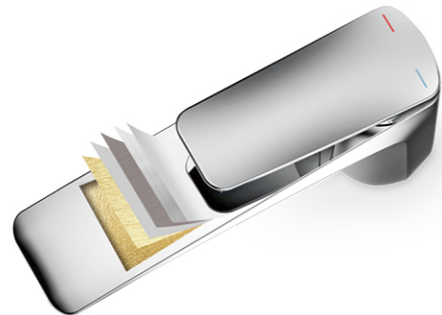

As Clear as Crystal / As Bright as the Moon

The unique luster presented by Platinum PVD has a higher color saturation than the traditional CP color. It is as clear as crystal and as bright as the moon, giving people a sense of stable, reserved and high-quality.

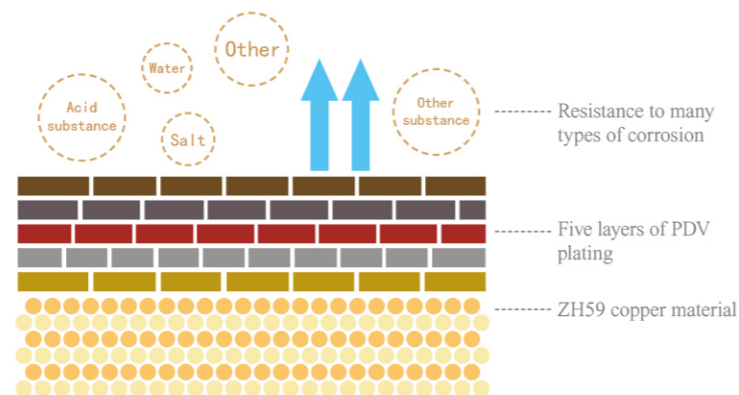

Level 5 Hardness / Lasting Brilliance

The surface treatment of Platinum PVD introduces the super-hard anti-corrosion film layer technology into bathroom products. After treatment, the hardness of the products can reach level 5 (equivalent to the hardness of crystal), and they are not afraid of scratches from scouring pads and steel wool balls, keeping the products as good as new permanently.

Nano Antibacterial / Crystal Pure and Bright

With the nanoscale PVD technology, the surface of the product is finer and smoother, which can effectively reduce the adhesion of fingerprints and stains. The antibacterial rate against Staphylococcus and Escherichia coli is over 92%, which can effectively inhibit the growth of bacteria and keep the product as pure, clean and bright as crystal.

As Clear as Crystal / As Bright as the Moon

Our company has been focusing on the research and development of PVD technology since 2000, and has successfully broken through the cost bottleneck of PVD technology, enabling the widespread application of PVD technology. Today, after decades of technological accumulation, we have continuously refined our own unique PVD color presentation.

In the early days, PVD technology was applied in the aerospace field. It complexly utilized advanced technologies such as vacuum technology and plasma technology to achieve the color presentation of products, and to ensure the high hardness and high wear resistance of products to the greatest extent.

We are proficient in the color presentation of PVD technology, which features high stability and a longer service life. We use environmentally friendly PVD production equipment, which will not cause pollution to the environment, reflecting our humanistic spirit.
